Chullin 47 – Good Morning Raboisai

1️⃣ Lung that Dried Out

Gemara:

👉 Case:

- Part of lung is **dry**

📌 How to check

👉 Use fingernail:

- If it **crumbles / falls apart** → problematic

👉 If still intact → not considered fully dry

2️⃣ Comparison – Bechor Ear

👉 By בכור:

- Dry ear = מום

👉 Tested by:

- Piercing → no blood

📌 חילוק

👉 Ear:

- Exposed → does not heal

👉 Lung:

- Internal → may heal

3️⃣ Surface Conditions

👉 Lung may have:

- Scabs
- Marks

- Discoloration

📌 **דין**

👉 These alone:

- Do NOT make it טריפה

4️⃣ **Blisters (בועות)**

👉 One blister → כשר

👉 Two blisters close together → טריפה

📌 **Why**

👉 Cannot properly check if there is a hole

5️⃣ **Doubt Case**

👉 If unsure:

- Take another blister
- Compare appearance

❗ **Rejected**

👉 Cannot compare:

- Each blister is different

6️⃣ **Sircha – Adhesions**

👉 Most common modern טריפה

👉 A **sticky attachment** between lung and another area

📌 **Cause**

👉 Body tries to:

- Seal a hole

👉 Creates:

- Temporary “plug”

❗ **Problem**

👉 Plug may detach

👉 Leaving hole → טריפה

7️⃣ **סדר הסירכות**

👉 If adhesion is:

- Between **adjacent lobes** → better

👉 If skipping lobes → טריפה

📌 **Reason**

👉 Natural vs unnatural attachment

8️⃣ **Structure of Lung**

👉 Five lobes:

- Right → 3
- Left → 2

📌 **Missing lobe**

👉 טריפה

📌 **Extra lobe**

👉 Depends:

- In normal place → כשר
- In unusual place → טריפה

9️⃣ צבעים – Colors of Lung

👉 **Black** → טריפה

👉 **Blue** → כשר

👉 **Green** → כשר

👉 **Red like meat** → טריפה

👉 **Yellow (like egg yolk)** → טריפה

📌 יסוד

👉 Some colors indicate:

- Damage

🔟 Texture Changes

👉 If lung:

- Hard like wood
- Or loses structure

👉 טריפה

1️⃣1️⃣ Blocked Lung

👉 Part does not inflate

📌 Check

👉 Cut open:

- If pus inside → כשר
- If not → טריפה

1️⃣ 2️⃣ Scab Covering Hole

👉 Not reliable

👉 Will fall off

👉 טריפה

1️⃣ 3️⃣ Hissing Lung

👉 Indicates air escape

📌 Check

- Use feather / spit
- Or warm water

👉 Bubbles → טריפה
👉 No bubbles → כשר

1️⃣ 4️⃣ Two Membranes

👉 Lung has:

- Inner layer
- Outer layer

📌 דין

👉 If hole only in inner:

- Air trapped → כשר

1️⃣ 5️⃣ Liquid-Filled Lung

👉 If contents pour out like water

👉 Still כשר

📌 **Condition**

👉 Bronchial structure must remain intact

1️⃣6️⃣ **Checking Internal Structure**

👉 Pour contents into bowl

👉 Look for:

- Strands (bronchi)

👉 If present → כשר
👉 If not → טריפה

1️⃣7️⃣ **Hole vs Missing Flesh**

👉 Hole:

- No flesh removed

👉 Missing:

- Flesh gone

📌 **Difference**

👉 Missing flesh:

- Even surface damage → טריפה

👉 Hole:

- Must reach deeper structures

1️⃣8️⃣ **Final יסוד**

- Lung defects vary widely
- Adhesions are major concern

- Structure, color, and texture all matter
- Practical checking methods are essential
- Not all abnormalities make treifa

🔑 **Key Takeaways**

- A dried lung is problematic only if it fully breaks apart
- Blisters are usually fine unless multiple and close together
- Adhesions (sirchos) are a major modern issue
- Lung structure (number of lobes) must be correct
- Certain colors indicate damage and treifa
- Texture changes like hardness are serious
- Blocked or hissing lungs require testing
- The lung's inner structure is critical for determining kashrus
